(MÖLLER, H.; 1975: Bibliography on parasites and diseases of marine fishes from North Sea and Baltic Sea. Ber.Inst.Meeresk.Kiel 15, 35pp.)

The only comprehensive description of biology and systematics of fish parasites from North Sea and Baltic Sea is given in "Die Tierwelt der Nord- und Ostsee", edited from 1927 to 1940 by GRIMPE & WAGLER. Since this time, systematics of certain parasite groups have been changed considerably, several new species have been described and a lot of new host records and results of ecological and morphological investigations have been published.

The present bibliography summarizes publications on parasites and diseases of marine fishes and of human injuries caused by fish parasites from 1927 to 1975. Contrary to GRIMPE & WAGLER's volumes, this bibliography is limited strictly to works that have been carried out on material from the Baltic and the North Sea.

The list includes all titles that appeared in "Aquatic Sciences and Fisheries Abstract", "Zoological Record" and "Helminthological Abstracts". Further informations were obtained from the libraries of the "Christian-Albrechts-Universität Kiel", "Institut für Meereskunde Kiel", "Biologische Anstalt Helgoland", "Kristinebergs Zoologiska Station", and the "Marine Biological Association of the United Kingdom (Plymouth)".

I wish to express my thanks to all colleagues who helped to complete this bibliography, especially to B.Berland (Bergen), H.Hentschel (Hannover), H.Mann (Hamburg), O.A.Scarlato (Leningrad), C.Sommerville (Stirling), and I.C.Williams (Hull).

The list was closed in December 1975.
